

WHAT IS CLAIMED IS:

Sub
B1

1. An object display device comprising:
a converter means for converting a representative
character string of source data containing character strings
5 into image data defined as an object;
a storage means for storing the source data and the image
in a manner of relating these pieces of data to each other; and
a display means for displaying the image data on display
means.
10
2. An object display device according to claim 1, further
comprising the display means for displaying the source data
linked to when the image data displayed is designated.
- 15 3. An object display device according to claim 1, wherein
the image data is structured such that the character string is
converted into a bitmap and thus laid out on an background image.
4. An object display device according to claim 3, wherein
20 the image data has a window, provided along a periphery of the
background image, for showing an attribute of the source data
to which the image data is linked.
5. An object display device according to claim 4, wherein
25 said display means displays the image data together with the
window, of which a frame size differs corresponding to a
capacity of the source data to which the image data is linked.

09555057.071000

6. An object display device according to claim 4, further comprising template images of plural types of windows, of which frame sizes are different,

5 wherein said template corresponding to a capacity of the source data is used.

B1
10 7. An object display device according to claim 4, wherein said display means displays the image data together with the window of which a frame configuration differs corresponding to the number of hours or days since the time when the source data to which the image data is linked was acquired.

15 8. An object display device according to claim 4, further comprising template images of plural types of windows, of which frame configurations are different,

wherein said template corresponding to the number of hours or days since the time when the source data was acquired.

20 9. An object display device according to claim 1, further comprising the display means for displaying in movement plural pieces of image data corresponding to respective pieces of source data in predetermined areas.

25 10. An object display device according to claim 9, further comprising:

a selector means for selecting a desired piece of image

09555057.071000

data from the image data displayed in movement; and
the display means for displaying the selected image data
in an area excluding the display area.

5 11. An object display device according to claim 10,
wherein the source data linked to is displayed on said display
means when the image data displayed is designated.

Pl
10 12. An object display method comprising:
a step of converting a representative character string
of source data containing character strings into image data
defined as an object;
a step of storing the source data and the image in a manner
of relating these pieces of data to each other; and
15 a step of displaying the image data on display means.

20 13. An object display method according to claim 12,
further comprising a step of displaying on said display means
the source data linked to when the image data displayed is
designated by designating means on the screen.

25 14. An object display method according to claim 13,
further comprising a step of making said display means display
the image data together with the window, of which a frame size
differs corresponding to a capacity of the source data to which
the image data is linked.

09555057-071000

15. An object display method according to claim 13,
further comprising a step of making said display means display
the image data together with the window of which a frame
configuration differs corresponding to the number of hours or
5 days since the time when the source data to which the image data
is linked was acquired.

16. An object display method according to claim 12,
further comprising a step of displaying in movement plural
10 pieces of image data corresponding to respective pieces of
source data in predetermined areas.

17. An object display method according to claim 12,
further comprising:

15 a step of selecting a desired piece of image data from
the image data displayed in movement; and

a step of displaying the selected image data in an area
excluding the display area.

20 18. An object display method according to claim 17,
further comprising a step of displaying the source data linked
to on said display means when the image data displayed is
designated.

25 19. A readable-by-computer recording medium stored with
a program, for execution, comprising:

a step of converting a representative character string

09555057.071000

B1

of source data containing character strings into image data defined as an object;

a step of storing the source data and the image in a manner of relating these pieces of data to each other; and

5 a step of displaying the image data on display means.

20. A readable-by-computer recording medium stored with a program according to claim 19, further comprising a step of displaying on said display means the source data linked to when
10 the image data displayed is designated by designating means on the screen.

21. An object display device according to claim 1, further comprising a set means for setting an effective period as
15 attribute information with respect to the source data,
wherein said converter means for conversion into the image data does not convert the source data with an elapse over the effective period into the image data.

20 22. An object display device according to claim 2, wherein the previous image data is not displayed when the source data is displayed on said display means upon the designation of the image data.

25 23. An object display device comprising:
a display means for displaying plural pieces of information in a manner of sequentially changing a display

0955057.071000

bl

content;

a detect means for detecting a predetermined user's operation for the information displayed; and

a record means for recording the information operated in
5 accordance with the detection of the users' operation.

24. An object display device according to claim 23, wherein the plural pieces of information are displayed in movement in predetermined display areas.

25. An object display device according to claim 23,
wherein the information is displayed in a predetermined display
format on said display means as the record of the information.

15 26. An object display device according to claim 23,
wherein the operation is a drag-and-drop operation aiming at
a desired piece of information.

27. An object display device according to claim 23,
20 further comprising:

the detect means for detecting a selection indicating operation with respect to the information recorded; and

the display means for displaying linked information
corresponding to the information subjected to the selection
25 indication operation.

28. An object display device according to claim 27,

wherein the linked information is source data, and

said object display device further comprises means for creating the information displayed by an extraction from the source data.

5

29. An object display device according to claim 28, wherein the source data belongs to a remote terminal connected via a network.

10

30. An object display method comprising:

a step of displaying plural pieces of information in a manner of sequentially changing a display content;

a step of detecting a predetermined user's operation for the information displayed; and

15

a step of recording the information operated in accordance with the detection of the users' operation.

20

31. An object display method according to claim 30, wherein said step of displaying the plural pieces of information includes a step of displaying the information in movement in predetermined display areas.

25

32. An object display method according to claim 30, wherein said step of recording the information includes a step of displaying the information in a predetermined display format on said display means.

09555057.071000

B1

33. An object display method according to claim 30, wherein the operation is a drag-and-drop operation aiming at a desired piece of information.

5 34. An object display method according to claim 30, further comprising:

B1 a step of detecting a selection indicating operation with respect to the information recorded; and

a step of displaying linked information corresponding to
10 the information subjected to the selection indication operation.

35. An object display method according to claim 34, wherein the linked information is source data, and

15 said object display method further comprises a step of creating the information displayed by an extraction from the source data.

36. An object display method according to claim 35,
20 wherein the source data belongs to a remote terminal connected via a network.

37. A readable-by-computer recording medium recorded with a program, to be executed by a computer, comprising:

25 a step of displaying plural pieces of information in a manner of sequentially changing a display content;

a step of detecting a predetermined user's operation for

09555057.071000

the information displayed; and

a step of recording the information operated in accordance with the detection of the users' operation.

5 38. A readable-by-computer recording medium recorded with a program according to claim 37, wherein said step of displaying the plural pieces of information includes a step of displaying the information in movement in predetermined display areas.

10 39. A readable-by-computer recording medium recorded with a program according to claim 37, wherein said step of recording the information includes a step of displaying the information in a predetermined display format on said display
15 means.

20 40. A readable-by-computer recording medium recorded with a program according to claim 37, wherein the operation is a drag-and-drop operation aiming at a desired piece of information.

25 41. A readable-by-computer recording medium recorded with a program according to claim 37, further comprising:
a step of detecting a selection indicating operation with respect to the information recorded; and

a step of displaying linked information corresponding to the information subjected to the selection indication

09555057.071000

B1

operation.

42. A readable-by-computer recording medium recorded
with a program according to claim 41, wherein the linked
5 information is source data, and

said program further comprises a step of creating the
information displayed by an extraction from the source data.

43. A readable-by-computer recording medium recorded
10 with a program according to claim 42, wherein the source data
belongs to a remote terminal connected via a network.
